Index

Sr. No.	Experiments	Page No.	Date	Remark	Signature
	Introduction to Chemistry laboratory				
1	Introduction to apparatus used in chemistry laboratory.	4-8			
	Basic Chemistry laboratory techniques				
2	Study of burner, operating pinch cock / stopcock and handling of concentrated acid and containers.	10-13			
	Quantitative Analysis (Long Experiments)				
3	To determine concentration in terms of molarity of NaOH by titrating it against (0.05M) standard solution of oxalic acid.	16-18			
4	To determine concentration in terms of molarity of HCl by titrating it against (0.05M) standard solution of sodium carbonate.	20-22			
	Qualitative Analysis (Long Experiment) (Any four water soluble salt)				
	Detection of one basic radical (cation) and one acidic radical (anion) qualitatively from given inorganic salt.				
5	The given inorganic salt no. 1 contains 1) Basic radical.....2) Acidic radical..... 3) Formula of the salt.....	36-40			
6	The given inorganic salt no. 2 contains 1) Basic radical.....2) Acidic radical..... 3) Formula of the salt.....	41-45			
7	The given inorganic salt no. 3 contains 1) Basic radical.....2) Acidic radical..... 3) Formula of the salt.....	46-50			
8	The given inorganic salt no. 4 contains 1) Basic radical.....2) Acidic radical..... 3) Formula of the salt.....	51-55			
9	The given inorganic salt no. 5 contains 1) Basic radical.....2) Acidic radical..... 3) Formula of the salt.....	56-60			
	Surface Chemistry (Short Experiments) (Any Two)				
10	To prepare colloidal solution of starch.	62-64			
11	To prepare colloidal solution of ferric hydroxide [$Fe(OH)_3$]	66-67			
12	Study of role of emulsifying agent in stabilizing the emulsion of an oil.	68-69			

Sr. No.	Experiments	Page No.	Date	Remark	Signature
	Chemical Equilibrium (Short Experiments) (Any One)				
13	Study the shift in equilibrium position between ferric ions and thiocyanate ions by increasing the concentration of either of the ions.	70-71			
14	Study the shift in equilibrium position between $[Co(H_2O)_6]^{2+}$ ions and chloride ions by increasing the concentration of either of the ions.	72-73			
	Experiment based on pH change (Short Experiments) (Any One)				
15	Study of the pH change in the titration of strong base (0.1 M NaOH) and strong acid (0.1 M HCl) using universal indicator.	74-75			
16	Determination of the pH and nature of solution of some salts using pH paper or universal indicator. (NH_4Cl, Na_2CO_3, CH_3COONa, NaCl, unknown salt)	76-77			
	Characterization and purification of chemical substances				
17	Determination of melting point of given organic solid.	78-79			
18	Determination of boiling point of given organic liquid.	80-81			
19	Crystallisation of an impure sample of copper sulfate or benzoic acid.	82-83			
	List of Activities				
1	Prepartion of 100 mL of 0.1 M standard oxalic acid solution.	84-85			
2	Determination of pH of different fruit juices by using pH paper or universal indicator.	86-87			
3	Calibration of pipette by burette.	88-89			
4	To obtain pure water from impure water containing ink by simple distillation method.	90-91			
5	Checking the adulteration in given food materials.	93			
6	To determine pH of HCl solution of various concentrations by using pH paper or universal indicator.	94-95			
7	To determine pH of NaOH solution of various concentrations by using pH paper or universal indicator.	96-97
