Index

Sr. No.	Experiments	Page No.	Date	Remark	Signature
Quantitative estimation (Long experiment)					
1	To determine the concentration in terms of molarity of $KMnO_4$ by titrating it against (0.1 M) standard solution of oxalic acid.	5-7			
2	To determine the concentration in terms of molarity of $KMnO_4$ by titrating it against (0.1 M) standard solution of ferrous ammonium sulphate.	9-11			
Chemical kinetics (Long experiment) (Any two)					
3	To study the effect of concentration on rate of reaction between $Na_2S_2O_3$ and HCl.	13-16			
4	To study the effect of temperature on rate of reaction between $Na_2S_2O_3$ and HCl.	18-20			
5	To study the rate of reaction between KIO_3 and $Na_2S_2O_3$ using starch as an indicator.	22-23			
Electrochemistry					
6	Study of variation of cell potential of cell $Zn\|Zn^{2+}\|\|Cu^{2+}\|Cu$ with change in concentration of electrolyte $CuSO_4$ and $ZnSO_4$ at room temperature.	26-29			
Thermochemistry (Short experiment) (Any three)					
7	To determine enthalpy of dissolution of $CuSO_4.5H_2O$ in water at room temperature.	31-33			
8	To determine enthalpy of neutralization of HCl and NaOH.	35-37			
9	To determine enthalpy change of displacement of Cu from $CuSO_4$ by Zn.	39-41			
10	To determine enthalpy change during the interaction between acetone and chloroform	43-45			
Inorganic preparations (Short experiment) (Any two)					
11	To prepare a pure sample of ferrous ammonium sulphate.	47-48			
12	To prepare a pure sample of potash alum.	50-51			
13	To prepare a pure sample of potassium trioxalatoferrate (III) complex.	53-54			

Sr. No.	Experiments	Page No.	Date	Remark	Signature
Organic preparations (Short experiment) (Any two)					
14	To prepare dibenzalacetone.	56-57			
15	To prepare 2-naphthol aniline dye.	59-60			
16	To prepare acetanilide from acetyl chloride.	62-63			
17	To prepare p-nitro acetanilide from acetanilde.	65-66			
Identification of functional group (Any four compounds)					
18	Test for functional group present in given organic compound.	71-74			
Characteristic tests of carbohydrates, proteins, fats and oil in pure samples and their detection in given food stuffs. (Any one of each)					
19	Characteristic tests of carbohydrate, proteins, fats and oils.	77-80			
Qualitative analysis for two acidic radicals (Any three water soluble salt mixture)					
Detection of two acidic radicals qualitatively from given inorganic salt mixture.					
20	The given inorganic salt mixture no.1 contains following two acidic radicals. i .....( ) ii .....( )	93-94			
21	The given inorganic salt mixture no.2 contains following two acidic radicals. i .....( ) ii .....( )	95-96			
22	The given inorganic salt mixture no.3 contains following two acidic radicals. i .....( ) ii .....( )	97-98			
Qualitative analysis for two basic radicals (Any three water soluble salt mixture)					
Detection of two basic radicals qualitatively from given inorganic salt mixture					
23	The given inorganic salt mixture no.1 contains following two basic radicals. i .....( ) ii .....( )	111-113			
24	The given inorganic salt mixture no.2 contains following two basic radicals. i .....( ) ii .....( )	114-116			
25	The given inorganic salt mixture no.3 contains following two basic radicals. i .....( ) ii .....( )	117-119			

Sr. No.	Experiments	Page No.	Date	Remark	Signature
	List of Activities (Any four)				
1	Preparation of phthalic anhydride from phthalic acid.	120-121			
2	Preparation of succinic anhydride from succinic acid.	122-123			
3	Preparation of methyl salicylate.	124-125			
4	Measurement of e.m.f. of commercial cells by using voltmeter. (Any four cells)	126-127			
5	Identification of Resin identification code (RIC) on given different plastic materials. (Any two plastic material)	128-129			
6	Preparation of 100 mL 0.1 M standard solution of ferrous ammonium sulphate. (Mohr's salt)	130-131			

Important Instructions

1) Read instructions of do's and dont's carefully.
2) Record your observations and calculations on sapce provided in the notebook.
3) Take signature of the batch incharge after completion of experiment on same day.
4) Read carefully the begining of each section, a concise explanatory account of theoretical experiments has been given.
5) Solve exercise of each experiment after completion of experiment on same day.
6) Use given space provided after each experiment for notes, rough work and rough calculations and then fair it to main experiment.
7) A Scheme of marking for practical examination is given on **page no. 143** for accurate working.
8) A format of question paper for annual practical examination is given for your information on **page no. 145.**
9) At the end, tables of logarithums is given for calculation.
10) At the end, tables for preparation of different concentration solutions and reagents are given in **appendix I to V.**
